BICYCLE RAILS

BR11F
Galvanised
SBR11F
Stainless Steel

OVERVIEW

Introducing one of our top-selling products: a cost-effective and functional bike rail designed to provide secure parking for two bicycles. With its versatility, affordability, easy installation, and suitability for short to medium term parking, these bike rails prove to be an excellent solution for a wide range of applications, including footpaths, recreation centres, schools, and retail shopping centres.

In practical terms, bicycle hitching rails, despite having the potential to accommodate two bicycles (one on each side), typically end up accommodating only one bicycle per rail. This is primarily because cyclists often hesitate to secure their bicycles if another bike is already attached to the rail.

To meet the requirements of AS2890.3, it is essential for bicycle frames to allow for securing both the frame and both wheels. Additionally, to ensure compliance, the spacing between the rails should be set at 1000mm apart. By adhering to these specifications, bicycle hitching rails can effectively meet the necessary standards and provide suitable parking solutions for cyclists.

Choose Securabike for your bicycle parking needs, and experience the quality and reliability that comes from our extensive expertise in the industry.

SPECIFICATIONS

- Plastic sleeve protects bicycle
- 40NB Pipe
- 200 x 100 x 6mm Baseplate (masonry anchors included on baseplate models)
- Mild steel: 40NB (50.0) x 1.5mm Light duty pipe / Hot dipped
